*Capital Ideas* Jeffrey M. Chwieroth 2009-12-14 The right of governments to employ capital controls has always been the official orthodoxy of the International Monetary Fund, and the organization's formal rules

providing this right have not changed significantly since the IMF was founded in 1945. But informally, among the staff inside the IMF, these controls became heresy in the 1980s and 1990s, prompting critics to accuse the IMF of indiscriminately encouraging the liberalization of controls and precipitating a wave of financial crises in emerging markets in the late 1990s. In *Capital Ideas*, Jeffrey Chwieroth explores the inner workings of the IMF to understand how its staff's thinking about capital controls changed so radically. In doing so, he also provides an important case study of how international organizations work and evolve. Drawing on original survey and archival research, extensive interviews, and scholarship from economics, politics, and sociology, Chwieroth traces the evolution of the IMF's approach to capital controls from the 1940s through spring 2009 and the first stages of the subprime credit crisis. He shows that IMF staff vigorously debated the legitimacy of capital controls and that these internal debates eventually changed the organization's behavior--despite the lack of major rule changes. He also shows that the IMF exercised a significant amount of autonomy despite the influence of member states. Normative and behavioral changes in international organizations, Chwieroth concludes, are driven not just by new rules but also by the evolving makeup, beliefs, debates, and strategic agency of their staffs.

**Parentology** Dalton Conley 2014-03-18 An award-winning  
scientist offers his unorthodox approach to  
childrearing: "Parentology is brilliant, jaw-droppingly  
funny, and full of wisdom...bound to change your thinking  
about parenting and its conventions" (Amy Chua, author  
of *Battle Hymn of the Tiger Mother*). If you're like many  
parents, you might ask family and friends for advice  
when faced with important choices about how to raise  
your kids. You might turn to parenting books or simply  
rely on timeworn religious or cultural traditions. But  
when Dalton Conley, a dual-doctorate scientist and full-  
blown nerd, needed childrearing advice, he turned to  
scientific research to make the big decisions. In  
*Parentology*, Conley hilariously reports the results of  
those experiments, from bribing his kids to do math  
(since studies show conditional cash transfers improved  
educational and health outcomes for kids) to teaching  
them impulse control by giving them weird names (because  
evidence shows kids with unique names learn not to react  
when their peers tease them) to getting a vasectomy  
(because fewer kids in a family mean smarter kids).  
Conley encourages parents to draw on the latest data to  
rear children, if only because that level of engagement

with kids will produce solid and happy ones. Ultimately  
these experiments are very loving, and the outcomes are  
redemptive—even when Conley's sassy kids show him the  
limits of his profession. *Parentology* teaches you  
everything you need to know about the latest literature  
on parenting—with lessons that go down easy. You'll be  
laughing and learning at the same time.

extremely expensive little book is probably worth the  
exorbitant price. Not only does the author introduce

networks, he also describes a model for basic chip

design. Surprisingly well written, the material is appropriate for anyone with an interest in neural

networks and background in basic mathematics and electronic engineering. Annotation copyright by Book News, Inc., Portland, OR
